Campus Co-Pilot

One Interface for Campus Operations

Your intelligent guide to navigating campus life, streamlining student support, and connecting every touchpoint into one seamless experience.

The Fragmented Student Experience

Students manage **5+ platforms daily** — and each task creates friction, delays, and lost focus.

Scattered Materials

Resources and lecture materials are distributed across Moodle sections

Complex Uploads

Assignments require navigating multiple folders and submission steps

Questions Get Buried

Zulip threads grow quickly, making it harder to track responses

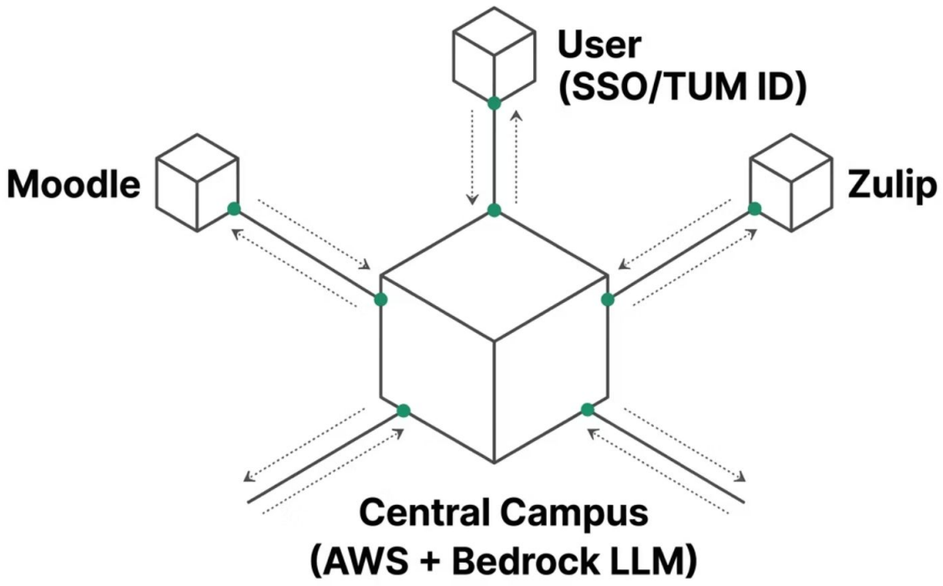
No Central Hub

Students switch between Moodle, Zulip, and other tools throughout the day

⚠ **Result:** Lost time, missed deadlines, and reduced productivity

Made with GAMMA

Our Solution — Architecture



Centralized AI Agent

- SSO / TUM ID — secure single sign-on
- AWS Bedrock — Claude / Llama for natural language understanding
- Integrated platforms — Moodle and Zulip

> One interface. Coordinated access. Streamlined delivery.

Made with GAMMA

How It Works — Simple 3-Step Workflow

From a single login to a completed action in seconds — the agent handles platform navigation automatically across core systems.

What You Say

> *"Upload my homework.pdf to Moodle — Course AI, Week 3 thread"*

What Happens

The agent interprets your request, authenticates securely, navigates to the relevant workspace, and completes the action — then confirms with a clear **"Done"** ✅

Made with GAMMA

Real Impact for Every TUM Student

−80%
Time on Logistics
Significantly less time spent moving between core platforms

1
Interface
One login replaces 6+ open tabs

30s
To Complete Tasks
Down from 10+ minutes of searching and switching

❌ Before Co-Pilot	✅ After Co-Pilot
Open 6+ tabs	One streamlined interface
10+ mins to find where to post	30 seconds
Missed replies in long Zulip threads	Auto-organized summaries
Forget where homework goes	The agent remembers each destination

Secure
TUM credentials are stored safely and never in plaintext

LLM-Powered
AWS Bedrock (Claude / Llama) understands natural language

Extensible
Add Moodle, Zulip, and more core platforms over time

Autonomous
The agent acts — not just chats
